

Stock lexus A49 , 22 pin plug on the AC amplifier. There is only one change, the wire with the pin on it from the new M12 connector goes into this plug in position #1
1, see the pink and blue in #1.

The colors on here are just for reference and an easy way to check and make sure you have the right connector and make sure you seat the new wire from M12
into the correct slot.

There may or may not be different wires in the blank spots, it should not matter. **THERE IS NO CUTTING OR SPLICING HERE**
