Fj60 “Sandwich Slot” Switch Panel

Includes 1 frame, 1 face plate, x1 #10 1-1/4” Screw, x4 #10 1” Screws

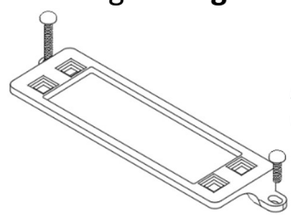

Please understand that the FJ60 instrument panels are old and delicate. No part of this installation should require you to force anything out of or into place. If you have any problems or questions about installation or removal of the new switch panel or FJ60 instrument panel, please reach out to me on ih8mud.com or etsy.com using the links posted on the bottom of this document

1. Remove Instrument panel carefully as well as the old dash pocket.

2. Now would be a good time to run any wiring through your FJ60 as its most accessible during this step but is not required.

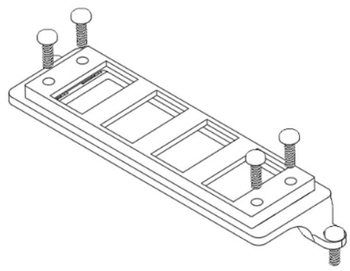

3. Install the new dash pocket frame using one of the pre-existing screws that came with you FJ60 on the right side of the frame, and use *the longer <u>included</u> screw on the left-hand side* of the frame. Be sure to pull any new wiring **through** the slot in the frame and not around it.

Long Screw on left side, Screw that came with your FJ60 on the right

4. Reinstall your FJ60 instrument panel

5. Install any switches to the dash pocket face plate and install the new dash pocket faceplate to the newly installed frame with the included 1” screws.
