.750" BACK UP	0.200	0.200	0.200	0.200	0.200	0.200	0.200	0.200	0.200	0.200	0.200	0.200	0.200

Apparently when Fox refers to "60/40" shock it means: 60% of the available compression damping / 40% of the available rebound damping.

See the separate notes in Mac Pages for notes pertaining to this from Sam and my overhaul and valving session on 12-16-09
